

# Humanitarian Demining Vulcan™ (HDV)

The Humanitarian Demining Vulcan™ (HDV) is a user-filled shaped charge used for low-order disposal of Explosive Remnants of War (ERW). Based on the renowned Vulcan™ System, the Humanitarian Demining Vulcan™ delivers unsurpassed performance at a very low NEQ. Not only that, the charges are extremely cost-effective.

Developed specifically for Non-Governmental Organizations (NGO), the Humanitarian Demining Vulcan™ has the same working dimensions as the renowned Vulcan™ which is in service all around the world.

## Features include:

- > Adjustable NEQ to match the target
- > Powerful and effective performance
- > Affordable by the NGOs
- > Lower logistical burden (no logistic restrictions)

## Metal Alloy Cone

The unique feature of the Humanitarian Demining Vulcan™ and Vulcan™ is the specially designed metal alloy jet forming cone which has been proved to reduce the risk of shock-to-detonation to virtually zero while guaranteeing a reliable ignition of the explosive fill of Unexploded Ordnance (UXO).

This leads to a rapid rise in internal pressure within the munition which produces case failure and the ordnance splitting apart in a low-order disruption. Used in the Vulcan™, the alloy cone has produced successful low-order disruptions against a huge range of munitions around the world with thousands of successful low orders.

## Adjustable NEQ

Explosive load can be adjusted by inserting the compression rings which fit internally into the body of the charge and provide a level to which the explosive can be loaded. The number of rings required varies inversely with the amount of explosive.

## Comprehensive System Package

The HDV System comes complete with 10 charge bodies and includes sturdy aluminium legs which can be adjusted to enable better positioning at the target. It includes one Metal Alloy Jet-Forming Cone per charge and a loading tool to facilitate compact loading of the explosive. The unique Alford Split Screw™ is included in each charge. This enables safe insertion of the detonator and the making of an array of charges if necessary. A pack of Plain Detonator Adaptors™ is also included.

## Specifications

Height	132mm
Diameter	45mm
Weight Empty	0.05kg
Weight Loaded	0.07-0.1kg
NEQ	20-50g

Before & After Low-Order

Exploded Charge Body

HDV Package Contents

## Other products to consider:

J-Etna™ - low ordering of munitions

W-Etna™ - IED disruption tool

Draken™ - IED disruption tool
